

FOR IMMEDIATE RELEASE

The Look of Metal with the Ease of Laminate

Ivyland, PA (August 23, 2017) — Take a shining to metallic laminates from Finish Tech Corp.!

Available in a variety of polished and brushed metal patterns, Finish Tech's high-gloss metallic polyester laminates offer versatility, durability and ease of application at a fraction of the cost of solid metal sheets. Choose from copper, silver, gold, pewter and galvanized steel finishes.

Metallic laminates are ideal for value engineering store fixtures, POP displays, furniture, picture frames and many other products either as a replacement for wood, thermoformable vinyls and metals or as an embellishment. They are fabricator friendly and can be profile wrapped, miter-folded, sawn, perforated, drilled, routed, punched, etc.

Finish Tech's metallic laminates work with a wide variety of substrates. For example, they can be laminated to coil or sheet metal including galvanized steel or aluminum; flat laminated to particleboard, MDF and hardboard; or profile wrapped using PUR glue.

The laminates will not chip, crack or peel. The metallic sheen maintains more than 95% gloss level at 60 degrees. They are available with Finish Tech's signature Scratch Resistant Finish (SRF) to add many years of surface protection against heat, stains, solvents and scratching. Tests show Finish Tech's SRF to be superior to EB and HPL when scratching with rotary 0000 steel wool.

Most Finish Tech metallic laminates are available in a range of 4 to 11 mils thick in 50" wide rolls depending on the need. All products are available on flexible or rigid vinyl or as non-PVC products. Customers can count on Finish Tech's expertise to specify the best product for an application.

Metallic laminates are only part of Finish Tech's comprehensive line of polyester laminates which also includes solid colors, eye-catching prints, woodgrains, pearls and holograms. All of these products, as well as custom finishes, are available with or without Finish Tech's SRF and/or a protective peel sheet with a flexible or rigid backer in various thicknesses to suit your processing needs. All products can be ordered with Finish Tech's Pressure Sensitive Adhesive.

For more information about Finish Tech's metallic and printed polyester laminate line, SRF, Peel Sheet and Pressure Sensitive Adhesive programs, visit www.finishtechcorp.com or contact Lee Frank, Client Relations Manager, at lee.frank@finishtechcorp.com or phone 215-396-8800.
